## Sherwin-Williams® Paint Match for KCD Cabinets

Kitchen Cabinet Distributors™ exclusively uses Sherwin-Williams® premium paint and stains for finishing our cabinets. The paint coatings used in the manufacturing of our cabinets are formulated specifically for production on an inline finishing equipment at the time of production. This process is important in manufacturing to provide exceptional coverage and durability but is not a process that is easily replicated outside of large-scale manufacturing.

The experts at Sherwin-Williams have worked to match their paints to KCDs cabinet colors and have made them available at any retail or commercial Sherwin-Williams store. By taking the formulations below to any Sherwin-Williams retail or commercial store, experts will be able to assist in creating the paint or stain that is the closest match to the KCD cabinet color.

Because the finishing process used in manufacturing is different than the finishing that may occur after the sale for trim, molding, or cabinet painting, it is important to note that the formulations provided below are intended to be the most accurate match as recommended by color experts at Sherwin-Williams. We recommend testing the color prior to painting by applying and drying a small amount to a sample chip prior to painting.

If you have any questions on paint matching, please contact your local Sherwin-Williams retail location.
